KDE4 in -current /testing and other Slackware news

2008-08-13

That's right -- KDE version 4.1 is now part of Slackware -current (in the /testing directory), so for everyone who can't wait to try it out, have a look at it! We're all (very happily) using it here now, and it has come a long way since the first 4.x release. Congratulations to the KDE team for the fine work (and many thanks to Robby Workmar and Heinz Wiesinger for all the help with build scripts and testing for the initial Slackware packaging of KDE4). Have fun! :-)

Also, we recently commissioned Mark from [Senile Felines Designs](#) to create a unique alternate [Slackware Logo](#), as we were getting a number of bug reports that the old logo could not be read easily while standing on one's head :-). We think he did a great job with it! If you like the new logo, we are selling shirts, stickers and other products with it at the [Official Slackware CafePress Store](#), and if the design proves to be popular we'll likely have some of these products mass-produced for the main [Slackware Store](#). Meanwhile, you can help support the Slackware project, and be the first on your block to show off the new Slackware anbigran logo! :-)

About

Slackware 12.1 is released!

2008-05-02

Well folks, it's that time to announce a new stable Slackware release again. So, without further ado, announcing Slackware version 12.1! Since we've moved to supporting the 2.6 kernel series exclusively (and fine-tuned the system to get the most out of it), we feel that Slackware 12.1 has many improvements over our last release (Slackware 12.0) and is a must-have upgrade for any Slackware user.

Among the many program updates and distribution enhancements, you'll find better support for RAID, LVM, and cryptsetup, a network capable (FTP and HTTP, not only NFS) installer, and two of the most advanced desktop environments available today: Xfce 4.4.2, a fast, lightweight, and visually appealing desktop environment, and KDE 3.5.3, the latest 3.x version of the full-featured K Desktop Environment.

The [official announcement](#) has more details. Also please consider helping to support the project financially at <http://store.slackware.com> (the CD set and DVD are off to replication, but pre-orders are being taken now). Your kind support and the help of many volunteers is what makes this project possible. Huge thanks are due to everybody who pitched in and helped with bug reports, patches, testing, suggestions, other comments, and everything else. Without this valuable input, Slackware would be nowhere near what it is today. Special thanks to the CREW, to the people developing and testing for [slackbuilds.org](#) (where many of Slackware's future additions are first built and

Dovendo scrivere un testo denso e piuttosto lungo, è stato scelto di adoperare un font con le grazie, più leggibile in questi casi.
